Subject: West

Good evening everyone,

Following up on the incident in West this evening, we ran the model to see where the winds will take whatever is in the air. ,

Strong southerly and southeasterly winds will take the cloud debris north and northeast, and should move fairly quick. The image below is a four hour sequence from 8 PM to Midnight.

Please note that we have NO IDEA what exactly is in the air at this point, so this is only an attempt to show where whatever it is will be blown by the winds. (I know, not a whole lot of concrete information at this point).

The office is staffed, so please let us know if you have any further questions.

Mark
